BYBLIS MEDICAL CONFERENCE

DESCRIPTION

This **three day laparoscopy course** is designed to give participants the **necessary theoretical knowledge** but also the **required skills** to safely perform those procedures frequently encountered in veterinary practice.

Day 1 focusses on the **material and instruments** required for videoendoscopic surgery. This also includes the techniques of how to safely achieve hemostasis by electro-surgical energy devices, surgical ligation and stapling. The essential motory skills for laparoscopic surgery are trained in the afternoon on simulators.

On day 2 the **different techniques to access the abdomen and create a pneumoperitoneum** are discussed. **Laparoscopic ovariectomy**, the new golden standard for surgical sterilization, is the first practical technique learned. This is followed by the **laparoscopic-assisted and glove-port surgery techniques** for CEH and pyometra. In the afternoon access techniques and surgical procedures are practiced on models.

Day 3 extends the participants skill set by addressing additional surgical techniques such as **cryptorchidectomy, gastropexy, percutaneous cystoscopy, and cholecystectomy**. These procedures are again practiced in the afternoon on models.
